

The screenshot shows a Visual Studio Code editor window with a dark theme. The title bar at the top reads "student course portal". The editor is open to a file named `course-card.spec.ts` in the `src/app/components/course-card` directory. The file contains a single test case that has passed, indicated by a green checkmark and the text "5 tests 491ms". Below the test, there is a large error message displayed, likely from a Jest or similar test runner. The error message is a JSON object representing an `HttpErrorResponse`. It includes details about the headers, status (0), status text ("Unknown Error"), and the URL ("http://localhost:3000/courses"). The error is a `TypeError: fetch failed`, which is an `AggregateError` with a cause of `internalConnectMultiple` at `node:net:1193:18` and `afterConnectMultiple` at `node:net:1783:7`. The error code is `ECONNREFUSED`. The bottom status bar shows the file is in "main" mode, with 26 lines, 4 columns, 2 spaces, and 0 errors. The system tray at the bottom indicates a temperature of 23°C, light rain, and the time is 12:01 AM on 1/22/2024.
